

Tamu Oil™

Therapeutic Actions

1. Eczema, psoriasis, dry skin, skin burns, fungal skin infections, diabetic sores and ulcers, acne, anal fissures, hives, bedsores, chapped feet and hands, insect bites, diaper rash
2. Nerve, muscle, and joint pain, especially of hot type such as shingles, sciatica, bursitis, post herpetic neuralgia, tendonitis

Administration

External: Apply sparingly to the affected area, three or more times per day. For large areas can be mixed with other vegetable oils if desired. (Not to be used internally.)

1 fluid ounce

Contraindications: Keep out of the eyes. Important to dilute if applied to the face. Contains tree nuts.

Ingredients

Tamanu oil

Calophyllum inophyllum

Avocado oil

Peppermint essential oil

Formula Rationale:

Tamu oil is a proprietary blend of three healing oils, which have soothing effects on the skin as well as pain relieving properties.

Tamu oil contains Tamanu oil, a rare ingredient from the south Pacific used to promote new skin tissue, and accelerate wound healing. It is traditionally used topically in the treatment of wounds, insect bites, burns, (sunburn, chemical, radiation), acne, psoriasis, diabetic sores, anal fissures, herpes, dry skin, diaper rash. It is also traditionally used to treat nerve, joint, and muscle pain, for example it has been used to treat sciatica, shingles, rheumatism and neuritis associated with leprosy. Tamanu oil must be specially processed to insure its therapeutic effect.

Tamanu oil contains lipids, calophyllic acid and a natural anti-inflammatory chemical called calophylloide. Individual constituents have anti inflammatory, antiviral and anti-bacterial properties. Tamanu oil absorbs easily onto the skin and many users report that their skin feels smooth and plump without residual oiliness. Tamanu nuts are air dried for two months and then cold pressed to extract the oil, it is then purified.

Avocado oil is traditionally used to treat dry skin, eczema, and psoriasis. Peppermint oil is used topically for joint pain, urticaria, and headache.

Clinical Notes

1. Typical response time for skin conditions as well as pain would be 2-6 weeks at the recommended dosage
2. For best results, combine with internal formulas

Additional Formulas

- For eczema and psoriasis of the hot type, use **Skin Balance** internally
- For eczema and psoriasis of the dry type, consider Skin Balance plus either **Marrow Plus** or **Nine Flavor Tea**
- For cases that do not respond to Tamu, use **Resinall K** topically, especially for blood stagnation
- For fungal-related conditions, use **Phellostatin** internally
- For allergic reaction, consider **Xanthium Relieve Surface**
- For nerve pain, consider **Channel Flow**
- For anti-inflammatory effects, consider **Mobility 2** or **EPAQ**
